

Getting Connected

Piping Modules & Hose Kits

Piping Modules

TIGG Corporation offers a full range of pipe racks to operate Cansorb liquid phase units. TIGG's 6-valve PVC pipe rack systems allow two Cansorbs to operate in series, lead lag, or single vessel. The 10-valve pipe rack permits backwashing one vessel while the other is on stream. All pipe rack systems include pressure relief valves, pressure gauges to monitor each vessel, and sample valves.

TIGG can also design a custom pipe rack for a three-vessel system. Automatic controls and other materials of construction are an option.

Hose Kits

When the application is temporary or cost is a concern, TIGG's hose kits can be used. Hose kits include adaptors to connect the Cansorb flange connections to quick connects and to the hose with quick connect ends. The single hose kit is for one Cansorb vessel, and the dual kit allows two Cansorb vessels to be used in series.
